DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1 - 7, 15 - 21 and 29, drawn to a method and a computer readable medium for automating an ASIC design flow and instantiating BIST modules, using a server, a network and front-end/back-end tools, classified in class 716, subclass 1.
 - II. Claims 8 - 14 and 22 - 28, drawn to a method and a computer readable medium for performing automatic placement and routing by a back-end software process by generating an initial size estimate of an area needed for a memory, classified in class 716, subclass 9.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I and II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention I has a separate utility such as using front end/back end tools over a network for automating an ASIC design,

including BIST modules; and invention II has a separate utility such a methodology for performing automatic placement and routing by a back end process by generating an initial size estimate for the area needed for a memory. See MPEP § 806.05(d).

3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

4. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
